ARUN DEV K V

SENIOR REACT NATIVE ENGINEER | MOBILE SYSTEMS ENGINEER

arundevkv1@gmail.com | 8129925632 | Kochi, Kerala, India | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Senior mobile engineer with 9+ years of software engineering experience, specializing in React Native, TypeScript, JavaScript, and production iOS/Android delivery. Experienced in owning mobile features beyond the UI—from application architecture and framework upgrades to native dependencies, authentication, APIs, data access, build systems, CI/CD, signing, release, diagnostics, and production troubleshooting. Strong track record investigating complex cross-platform failures and modernizing legacy systems, including performance optimization and version upgrades for a Node.js backend serving a 10,000+ user base.

CORE EXPERTISE

Mobile Engineering
React Native, TypeScript, JavaScript, React, iOS, Android, Hermes, React Navigation, Reanimated, React Native Screens, React Native Maps

Identity & Security
Auth0, React Native Auth0, OAuth 2.0 / OIDC, Universal Login, Universal Links, Android App Links, token lifecycle, RBAC, Open Policy Agent

Notifications & Diagnostics
Firebase Cloud Messaging, APNs, Notifee, React Native Firebase, Heap, application logging, production diagnostics

Native & Release
Xcode, CocoaPods, Gradle, Kotlin tooling, Android SDK/NDK, code signing, entitlements, TestFlight, Google Play, environment/flavor management

Backend & Data
Node.js, REST APIs, MongoDB, Mongoose, PostgreSQL, Oracle, SQL, stored procedures; working knowledge of C#/.NET

Delivery & Tooling
Azure DevOps / Azure Pipelines, Git, Yarn, CI/CD, multi-environment release workflows, API integration and troubleshooting

PROFESSIONAL EXPERIENCE

Zero Pixels | Software Developer / React Native Engineer | Oct 2021 – Present

- Build and maintain production React Native applications for iOS and Android, with responsibility spanning feature delivery, native integration, environment configuration, authentication, API integration, build systems, and release troubleshooting.
- Drive React Native modernization and version-upgrade work across complex applications, resolving compatibility issues across Hermes, third-party native modules, CocoaPods, Gradle, Kotlin, Xcode, Android SDK/NDK, and platform-specific behavior.
- Engineer mobile authentication flows using Auth0 and OIDC concepts, including Universal Login, secure token-aware API communication, iOS Universal Links/Associated Domains, Android App Links, callback configuration, and multi-environment troubleshooting.
- Develop interactive account-mapping experiences using React Native Maps, viewport/boundary-based data loading, clustering, location search/autocomplete, zoom-aware behavior, and platform-specific marker/rendering optimizations.
- Implement and troubleshoot push-notification flows across FCM, APNs, React Native Firebase, and Notifee, accounting for foreground, background, terminated-state, permission, channel, and device-vendor differences.
- Support repeatable mobile delivery through Azure Pipelines, build variants/schemes, environment configuration, versioning, signing, provisioning, TestFlight/Google Play workflows, and production build diagnosis.
- Integrate enterprise REST APIs and authorization controls, including role/policy-based access patterns with RBAC and Open Policy Agent, while tracing issues across mobile, identity, service, and database boundaries.
- Contribute backend and data-layer troubleshooting across Node.js services, MongoDB, PostgreSQL, Oracle, stored procedures, pagination/filtering contracts, and service-to-service integration.

PIT Solutions | Software Engineer | Sep 2017 – Oct 2021

- Progressed from early-career application development into production software engineering, building and maintaining JavaScript-based applications and strengthening cross-platform delivery, debugging, API integration, and release practices.
- Performed performance optimization and version modernization for a legacy Node.js backend application supporting a 10,000+ user base, improving the maintainability and technical currency of a live production system.
- Worked across frontend/mobile and backend-facing concerns, translating product requirements into maintainable application code and diagnosing issues across client, API, and data boundaries.

SELECTED ENGINEERING STRENGTHS

- Cross-platform problem solving: trace failures across React Native, iOS, Android, identity providers, APIs, native build systems, and databases rather than treating symptoms in isolation.
- Mobile platform modernization: plan framework upgrades as compatibility programs covering JavaScript behavior, native modules, build tooling, SDK requirements, and regression validation on both platforms.
- Production reliability: investigate notification behavior, request/API failures, signing/install issues, environment drift, and device-specific regressions using logs and reproducible evidence.
- Full application-path fluency: mobile-first specialization supported by backend/API, database, authentication, CI/CD, and release-engineering knowledge.

EDUCATION & CERTIFICATION

Master of Computer Applications (MCA) — Cochin University of Science and Technology (CUSAT) | 2014 – 2017
Bachelor of Science (B.Sc.) in Mathematics — St. Berchmans College, Changanacherry | 2011 – 2014
Microsoft Certified Professional — Microsoft | Issued Mar 2018
